Step up to Walters Buildings!

At Walters Buildings, we realize your buildings require individual and unique attention. That's why we listen to your needs first, and then design a building based on your specifications.

Our high-quality materials, outstanding warranties, and the skilled craftsmanship of our crews have been keeping customers satisfied for over 50 years.

36" panel coverage
28 gauge minimum
Non-Prorated Warranties

Excellence:

- 28-gauge material
- G90 galvanizing – one of the heaviest in the industry
- Superior paint finish – color retention and chalking resistance
- Zinc phosphate pre-treatment compliments the EnviroClean Paint System–enhances adhesion and corrosion performance
- Industry wide recognition for superior corrosion resistance
- All ceramic Cool pigmentation to meet minimum solar reflectance requirements for Energy Star approval criteria
- Over 50 years experience

Variety:

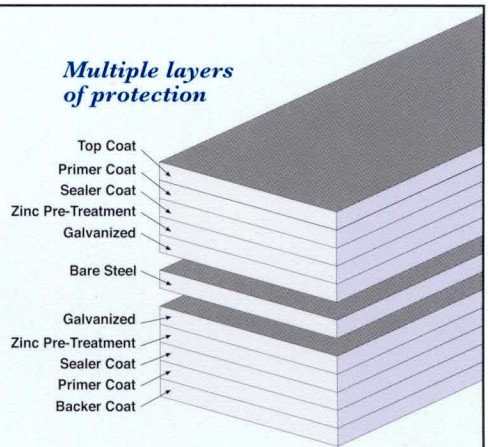
- Choice of 14 colors and bare Galvalume®
- A wide selection of complimentary trims are also available

Reliability:

- Non-Prorated Warranties
- 92,000 PSI average – 80,000 PSI minimum

Walters' EnviroClean Paint System with DuPont® Teflon® Surface Protection

Superior performance starts with superior paint. Because our product line is used in a variety of applications and climates, the quality of its paint coating is of utmost importance. Walters uses a modified silicone polyester paint system which is stronger and harder than traditional silicone polyester systems yet more flexible. This unique coating combines proprietary resin technology with color-fast ceramic pigments for maximum color retention and resistance to fading. Our finish has undergone rigorous testing in the most dire of circumstances, ensuring that our product combines exceptional durability with long-lasting aesthetics.
Walters has taken its paint system to the next level by adding DuPont Teflon surface protection which helps protect the steel from dirt build-up so your building looks newer longer.



Walters Buildings utilizes roll-forming equipment and sheet leveling press which provide the means to roll-form 92,000 psi average (80,000 psi minimum) structural quality steel into a structural, engineered panel. The panel features 1" deep geometric designed, diaphragm enhancing rib which assures reliable integrity for your roof and sidewall panels.
